1.2 Bitree 2D

Given a 2d array allow you to sum *val* to the position (x, y) and find the sum of the rectangle with left top corner $(x1, y1)$ and right bottom corner $(x2, y2)$

Update and query 1 indexed !

Time: update $O(logn^2)$, query $O(logn^2)$

```

};
```

1.5 DSU/UFDS

Uncomment the lines to reover which element belong to each set.
Time: $\approx O(1)$ for everything.

```
struct DSU {
  vi ps;
  vi size;
  // vector<unordered_set<int>> sts;
  DSU(int N) : ps(N + 1), size(N, 1), sts(N) {
    iota(all(ps), 0);
    // for (int i = 0; i < N; i++) sts[i].insert(i);
  }
  int find_set(int x) { return ps[x] == x ? x : ps[x] =
   find_set(ps[x]); }
  bool same_set(int x, int y) { return find_set(x) == find_set(
   y); }
  void union_set(int x, int y) {
    if (same_set(x, y)) return;

    int px = find_set(x);
    int py = find_set(y);

    if (size[px] < size[py]) swap(px, py);

    ps[py] = px;
    size[px] += size[py];
    // sts[px].merge(sts[py]);
  }
};
```

1.6 Ordered Set

If you need an ordered **multi**set you may add an id to each value. Using greater_equal, or less_equal is considered undefined behavior.

- **order_of_key (k)** : Number of items strictly smaller/greater than k .
- **find_by_order(k)** : K-th element in a set (counting from zero).

```
#include <ext/pb_ds/assoc_container.hpp>
#include <ext/pb_ds/tree_policy.hpp>
using namespace __gnu_pbds;

template <typename T>
using ordered_set =
  tree<T, null_type, less<T>, rb_tree_tag,
   tree_order_statistics_node_update>;
```

1.7 Prefix Sum 2D

Given an 2d array with n lines and m columns, find the sum of the subarray that have the left upper corner at $(x1, y1)$ and right bottom corner at $(x2, y2)$.
Time: build $O(n \cdot m)$, query $O(1)$.

```
struct psum2d {
  vll2d s;
  vll2d psum;
  psum2d(vll2d &grid, int n, int m)
    : s(n + 1, vll(m + 1)), psum(n + 1, vll(m + 1)) {
    for (int i = 1; i <= n; i++)
      for (int j = 1; j <= m; j++) s[i][j] = s[i][j - 1] + grid
   [i][j];

    for (int i = 1; i <= n; i++)
      for (int j = 1; j <= m; j++) psum[i][j] = psum[i - 1][j]
   + s[i][j];
  }

  ll query(int x1, int y1, int x2, int y2) {
    ll ans = psum[x2][y2] + psum[x1 - 1][y1 - 1];
    ans -= psum[x2][y1 - 1] + psum[x1 - 1][y2];
    return ans;
  }
};
```

1.8 SegTree Range Sum Query Range PA sum/set Update

Makes arithmetic progression updates in range and sum queries.
Considering $PA(A, R) = [A + R, A + 2R, A + 3R, ...]$

- **update_set(l, r, A, R):** sets [l, r] to PA(A, R)
- **update_add(l, r, A, R):** sum PA(A, R) in [l, r]

    return;
  }
  solve(n - 1, s, 6 - s - e);
  move(s, e);
  solve(n - 1, 6 - s - e, e);
